Figure 1 is a line graph showing the time course of the effect of 100 mg/kg of diazepam on the plasma concentration of diazepam in rats. The y-axis is labeled 'Plasma concentration (mg/ml)' and ranges from 0 to 1.0. The x-axis is labeled 'Time (h)' and ranges from 0 to 12. There are four data series: a solid line with open circles (highest concentration), a solid line with solid circles, a dashed line with open circles, and a dashed line with solid circles (lowest concentration). All series show a peak around 2-4 hours and then a decline. The solid lines are higher than the dashed lines, and the circles are higher than the solid circles.
